

Managing a film-based, paper-driven operation is expensive and inefficient. Many large hospitals have moved to RIS/PACS systems to decrease cost, improve efficiencies and increase exam-related revenue.

Studies have shown that moving to a paperless and filmless solution can reduce radiologists' time per exam by over 80%!* For rural/community hospitals the move to RIS/PACS has proven difficult as many vendors have priced the RIS/PACS systems outside of the reach of community and rural hospitals.

This is unfortunate, because it is precisely the rural/community hospital that needs the benefits of such systems the most. With integrated RIS/PACS these hospitals can securely share images with radiologists and referring physicians to ensure their patients get the same standard of care that larger hospitals, with their large staffs and abundant resources, are able to offer.

There are many RIS and PACS products available. So what makes PRS' solution attractive?

Integration

The RIS/PACS is integrated so that they seamlessly interact to ensure speed, communication, and reliability.

Reliability

PRS offers a tier-1 RIS/PACS solution that is being used by over 100 facilities across the nation. It is a feature-rich system with proven reliability.

Speed

Your data is stored on-site so that it can be accessed at network speed (nearly 70 times faster than a T1 connection)—no need to wait for images to download from a remote server.

Accessibility

Through the web viewer, you and your referring physicians will enjoy anywhere, anytime access to images and reports. You can have secure access in the hospital, at home, the physician's office or anywhere else.

Local Service

PRS' skilled technicians live and work in your area. You are assured of a fast and reliable response to any of your service needs.

Backup

PRS includes secure off-site archiving as a key part of its solution. At no extra cost you are ensured of the safe storage of your images and data.

Professional Interpretation and Coverage

PRS has teamed with talented, fellowship-trained radiologists who can use the PRS RIS/PACS system to help with overflow, subspecialty, nighttime, and vacation coverage.

Affordability

PRS' unique pricing model allows us to offer our solution at a small fraction of the cost of comparable systems. PRS combines minimal up-front spending with a simple per-exam fee to ensure that the state-of-the-art solution is affordable for even small hospitals.

PRS' innovative solution offers a powerful blend of products, services, and affordability that is unmatched in the industry. Let us show you how our solution can help your hospital improve patient care and increase profitability.
